Phase Transitions
Decrease (π) of free surface energy (γ) as a basis for the development of equations for adsorption isotherms; and the existence of two condensed phases in films on solids, W. D. Harkins and G. Jura—112(L)
Equations for the pressure (π)-area (σ) relations (isotherms) of liquid expanded and intermediate monolayers on water, G. Jura and W. D. Harkins—113(L)
Existence of expanded and intermediate phases in films on solids, G. Jura and W. D. Harkins—114(L)

Photochemistry
Application of probability considerations to the mechanism of the photochemical polymerization of acetylene, B. Ł. Dunicz—37; Erratum—204(L)
Bromination of hydrocarbons. I. Photochemical and thermal bromination of methane and methyl bromine, carbon-hydrogen bond strength in methane, G. B. Kistiakowsky and E. R. Van Artsdalen—469
Bromination of hydrocarbons. II. Photochemical bromination of ethane and ethyl bromide, carbon-hydrogen bond strength in ethane, H. C. Andersen and E. R. Van Artsdalen—479
Charge effect in photographic development. Role of the gelatin, T. H. James—453
Dependence of the intensity of fluorescence on the composition of a fluorescing solution, G. K. Rollefson and H. W. Dodgen—107
Erratum: Chain photolysis of acetaldehyde in intermittent light, W. L. Haden, Jr., and O. K. Rice—521(L)
Mercury photosensitized polymerization of acetylene, D. J. LeRoy and E. W. R. Steacie—117
Mercury photosensitized polymerization and hydrogenation of butadiene, H. E. Gunning and E. W. R. Steacie—484
Mercury-sensitized reaction between hydrogen and nitric oxide, H. A. Taylor and C. Tanford—47
Photolysis of methylamine, O. C. Wetmore and H. A. Taylor—61
Reaction of hydrogen atoms with acetylene, D. J. LeRoy and E. W. R. Steacie—369
Resonance emission of cadmium hydride bands in cadmium photosensitized reactions of hydrocarbons, E. W. R. Steacie and D. J. LeRoy—34

Polymers
Application of probability considerations to the mechanism of the photochemical polymerization of acetylene, B. Ł. Dunicz—37; Erratum—204(L)
Copolymerization of systems of three and more components, T. Alfrey, Jr., and G. Goldfinger—322(L)
Effect of deformation on the swelling capacity of rubber, P. J. Flory and J. Rehner, Jr.—412
Effect of non-homogeneity of molecular weight on the scattering of light by high polymer solutions, B. H. Zimm and P. M. Doty—203(L)
Electrical anisotropy of xerogels of hydrophile colloids. Part I, S. E. Sheppard and P. T. Newsome—244
Electrical anisotropy of xerogels of hydrophile colloids, S. E. Sheppard and P. T. Newsome—513
Equilibrium distribution in sizes for linear polymer molecules, A. V. Tobolsky—402
Mechanism of copolymerization, T. Alfrey, Jr., and G. Goldfinger—205
Mercury photosensitized polymerization of acetylene, D. J. LeRoy and E. W. R. Steacie—117
Molecular theory of the viscoelastic behavior of an amorphous linear polymer, T. Alfrey, Jr.—374
Polymer spectra of a cyanine dye, R. W. Mattoon—268
Some light scattering experiments with high polymer solutions, P. M. Doty, B. H. Zimm, and H. Mark—143(L)
Steady-state approximation in polymerization kinetics, W. H. Stockmayer—143(L)
Theory of chain copolymerization reactions, R. Simha and H. Branson—253

Polymers (*continued*)
Theory of molecular size distribution and gel formation in branched polymers. II. General cross linking, W. H. Stockmayer—125
Thermodynamics of heterogeneous polymer solutions, P. J. Flory—143(L)
Thermodynamics of heterogeneous polymers and their solutions, P. J. Flory—425

Quantum Mechanics (see **Mechanics, Quantum**)

Raman Spectra
Depolarization of Raman lines. A further simplification of method, G. Glockler, J. F. Haskin, and C. C. Patterson—349(L)
Erratum: Raman spectra of acetylenes. VII. Symmetrical-top acetylenes, F. F. Cleveland and M. J. Murray—320
Of acetylenic bromides, iodides, and ketones and of some cyclic compounds, M. J. Murray and F. F. Cleveland—156
Of hexachloroethane and hexabromoethane, D. T. Hamilton and F. F. Cleveland—249
Of some disubstituted diacetylenes, A. G. Meister and F. F. Cleveland—393
Of 2,5-Dimethyl-1,5-hexadiene and 2,5-dimethyl-2,4-hexadiene, F. F. Cleveland—53

Rotation
Asymmetric rotor. II. Calculation of dipole intensities and line classification, P. C. Cross, R. M. Hainer, and G. W. King—210
Electrostatic contribution to hindered rotation in certain ions in solution. III, T. L. Hill—56
Electrostatic contribution to hindered rotation in certain ions and dipolar ions in solution. IV, T. L. Hill—147
Empirical correlation and method of calculation of barriers hindering internal rotation, J. G. Aston, S. Isserow, G. J. Szasz, and R. M. Kennedy—336

Solutions (see **Liquids**)
Spectra (see **Absorption Spectra, Fluorescence, Raman Spectra**)
Statistical Mechanics (see **Mechanics, Statistical**)
Surface Phenomena
Accommodation coefficients on gas covered platinum, I. Amdur, M. M. Jones, and H. Pearlman—159
Approximate relation between surface tension and concentration for regular solutions, M. Wales—135
Condensation and supersaturation of adsorbed phases, H. M. Cassel—115(L)
Decrease (π) of free surface energy (γ) as a basis for the development of equations for adsorption isotherms; and the existence of two condensed phases in films on solids, W. D. Harkins and G. Jura—112(L)
Dissociation of methyl chloride on a hot filament, P. M. Doty—399
Electron affinity of bromine and a study of its decomposition on hot tungsten, P. M. Doty and J. E. Mayer—323
Equations for the pressure (π)-area (σ) relations (isotherms) of liquid expanded and intermediate monolayers on water, G. Jura and W. D. Harkins—113(L)
Existence of expanded and intermediate phases in films on solids, G. Jura and W. D. Harkins—114(L)
Relationship between the Brunauer-Emmett-Teller adsorption isotherm and the new isotherm of Jura and Harkins, H. K. Livingston—466(L)
Surface area of crystalline egg albumen, T. M. Shaw—391(L)
Surface tension and van der Waals' equation, F. C. Auluck and R. N. Rai—321(L)

Thermionic Emission
Direct experimental determination of the electron affinity of oxygen, D. T. Vier and J. E. Mayer—28
Electron affinity of bromine and a study of its decomposition on hot tungsten, P. M. Doty and J. E. Mayer—323
Vapor pressures, heats of vaporization, and entropies of some alkali halides, B. H. Zimm and J. E. Mayer—362

Thermodynamic Properties
And potential energy of solid argon, O. K. Rice—289
Approximate relation between surface tension and concentration for regular solutions, M. Wales—135
Bromination of hydrocarbons. I. Photochemical and thermal bromination of methane and methyl bromine, carbon-hydrogen bond strength in methane, G. B. Kistiakowsky and E. R. Van Artsdalen—469
Bromination of hydrocarbons. II. Photochemical bromination of ethane and ethyl bromide, carbon-hydrogen bond strength in ethane, H. C. Andersen and E. R. Van Artsdalen—479
Butene-1 and butene-2 equilibrium, W. W. McCarthy and J. Turkevich—405
Decrease (π) of free surface energy (γ) as a basis for the development of equations for adsorption isotherms; and the existence of two condensed phases in films on solids, W. D. Harkins and G. Jura—112(L)
Dissociation of ammonium chloride, C. C. Stephenson—318
Dissociation of H_2O into H+OH, R. J. Dwyer and O. Oldenberg—351
Dissociation of methyl chloride on a hot filament, P. M. Doty—399
Effect of substituents on the dissociation constants of carboxylic acids, J. N. Sarmousakis—277
Electron affinity of bromine and a study of its decomposition on hot tungsten, P. M. Doty and J. E. Mayer—323
Empirical correlation and method of calculation of barriers hindering internal rotation, J. G. Aston, S. Isserow, G. J. Szasz, and R. M. Kennedy—336
Energies of solution of silica in water and HCl, P. G. Nutting—347
Equations for the pressure (π)-area (σ) relations (isotherms) of liquid expanded and intermediate monolayers on water, G. Jura and W. D. Harkins—113(L)

Erratum: Frequency spectrum of crystalline solids. II. General theory and applications to simple cubic lattice, E. W. Montroll—111
Existence of expanded and intermediate phases in films on solids, G. Jura and W. D. Harkins—114(L)
Frequency spectrum of crystalline solids. III. Body-centered cubic lattices, E. W. Montroll and D. C. Peaslee—98
Heat capacity of gaseous butadiene-1,3, J. G. Aston, G. W. Moessen, H. C. Hardy, and G. J. Szasz—458
Hyperconjugation in paraffin hydrocarbons, G. W. Wheland and J. T. Pinkston, Jr.—69
Molecular structure and thermodynamics of propane. The vibration frequencies, barrier to internal rotation, entropy, and heat capacity, K. S. Pitzer—310
Of gaseous sulfur trioxide, W. H. Stockmayer, G. M. Kavanagh, and H. S. Mickley—408
Surface tension and van der Waals' equation, F. C. Auluck and R. N. Rai—321(L)
Theory of molecular size distribution and gel formation in branched polymers. II. General cross linking, W. H. Stockmayer—125
Thermodynamics of heterogeneous polymer solutions, P. J. Flory—114(L)
Thermodynamics of heterogeneous polymers and their solutions, P. J. Flory—425
Vapor pressures, heats of vaporization, and entropies of some alkali halides, B. H. Zimm and J. E. Mayer—362
Vibrational spectrum of pyridine and the thermodynamic properties of pyridine vapors, C. H. Kline, Jr., and J. Turkevich—300

Thermodynamics
Principles of thermodynamics, B. Leaf—89

Valence (see also **Mechanics, Quantum**)
Bond moments of higher valence states, R. Samuel—521(L)
Molecular constants and chemical theories. I. The parachor (molecular volume), R. Samuel—167
Molecular constants and chemical theories. II. Additive molecular constants and chemical structures, R. Samuel—180
Molecular constants and chemical theories. III. Bond moments of higher valence states, R. Samuel—380
Relation between bond multiplicity and interatomic distance, J. L. Kavanau—467(L)

Vapor Pressure
Vapor pressures, heats of vaporization, and entropies of some alkali halides, B. H. Zimm and J. E. Mayer—362

Viscosity
And structure of pure hydrocarbons, H. A. Kierstead and J. Turkevich—24
